Facilitator Optimize Card

Role:
Prevent over-optimization that erases meaning/voices.

Encourage
- Questioning constraints
- Spoting silenced relations and entities
- Revisiting earlier stages if needed

Intervene Against
- Premature normalization
- Over-engineering

Typical Failure Modes
- Model optimized for implementation, not representation
- Participants exhausted into agreement

Recovery Prompts
- "What assumption is this optimization relying on?"
- "What do we lose if we silence this entity/relation?"

Exit Condition
- Model is consistent *and* its limitations are documented.
