Role Card : **Regular Reader / Researcher (Voice of Fair Access)**

Role Name: Frequent Library User

VOICE:

"I use the library often and return books on time — that should count."

Primary Concerns:

- Limited copies of popular or academic books
- Competition with new or inactive users
- Losing access despite responsible behavior

What You Advocate For:

- Priority or reputation-based access for reliable readers
- Recognition of good borrowing behavior (on-time returns)
- Fair but transparent prioritization rules

Key Questions You Raise:

- Does the system know my borrowing reliability?
- Do frequent users get any priority?
- How is 'fairness' defined when books are limited?

Validation Check:

Does the model record borrowing history and return behavior to support fair priority decisions?
